

Make a Flat Paper Sailboat

Seven parts, a glue stick and a separate backing sheet.

Print the parts page at 100% on the matching paper size. An adult cuts around the seven outside outlines: hull, mast, two sails, flag and two water strips. Keep the small flag with the larger pieces.

On a separate sheet, place the mast upright. Put the large yellow sail to its left, with the tall edge next to the mast. Put the smaller blue sail to its right. The bottom edges of both sails sit just above the hull.

Place the red hull across the bottom 5 mm of the mast. Put the flag against the top right of the mast. Arrange the longer water strip below the hull and the shorter strip below that.

Compare your loose arrangement with the picture, then glue the mast first, sails next, flag and hull in front, and water strips last. This makes a flat collage; nothing folds, stands up or floats.
